# COVID-19 in Arizona

Week of November 30, 2020

ARIZONA DEPARTMENT  
OF HEALTH SERVICES

---

# Summary & Recommendations

## Data Summary

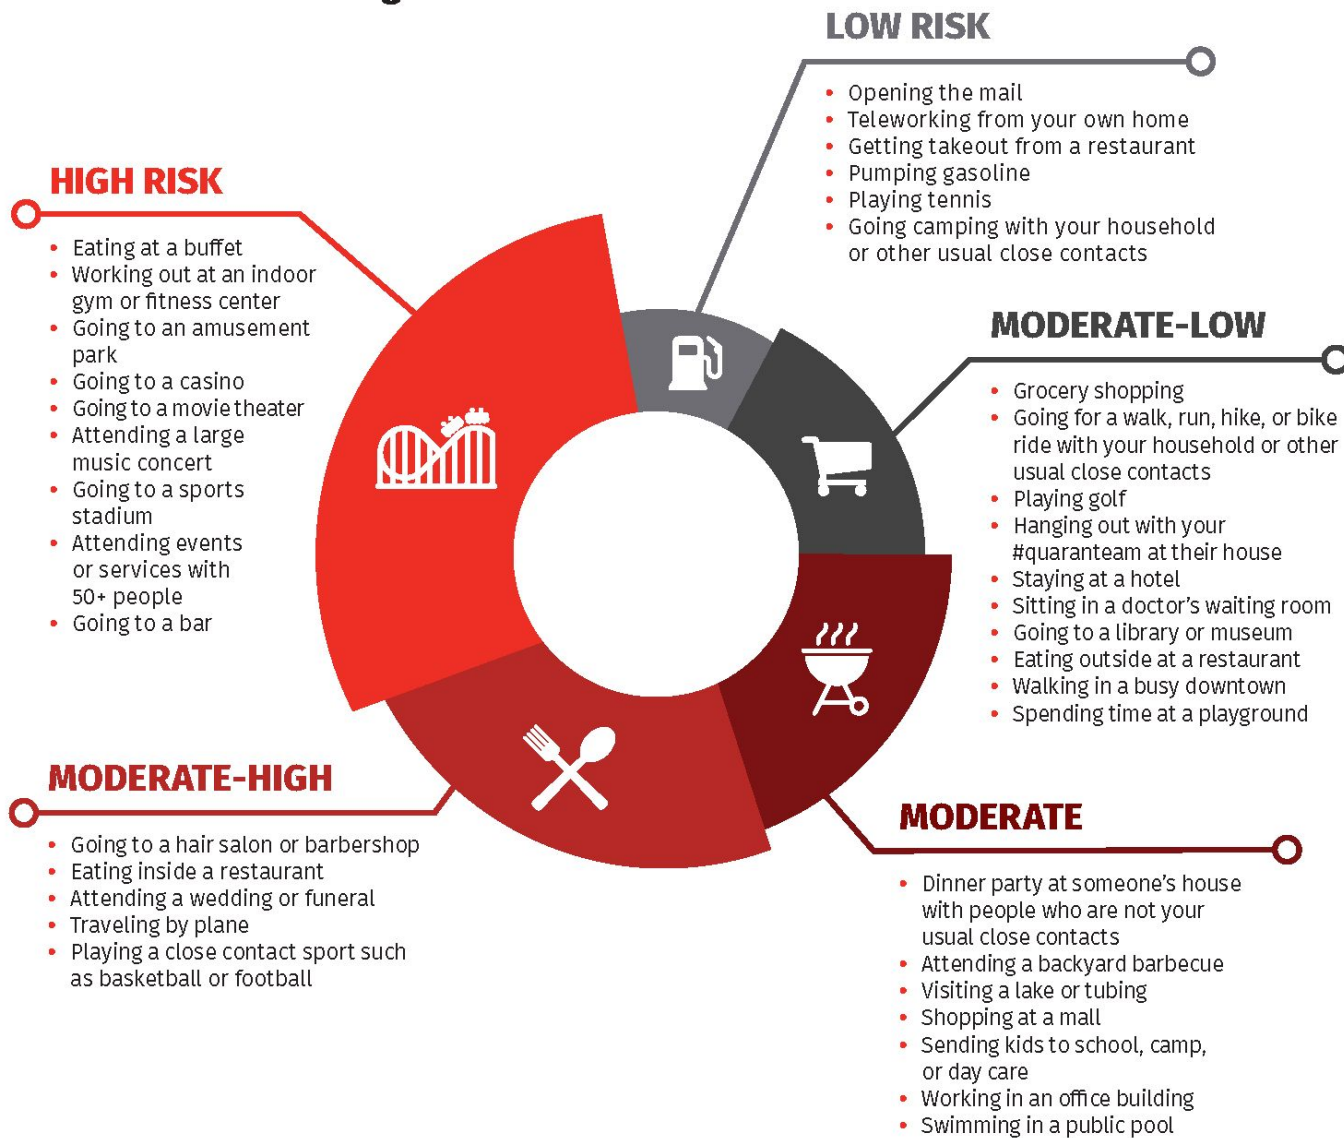

- Arizona is currently experiencing an increase in the number of cases and percent positivity.
- Nearly all counties saw increased rates of COVID-19 in their communities.
- Percent positivity has continued to increase (14.5% the week of Nov. 22) indicating increased community spread.
- While the statewide metrics still meet the benchmarks for the moderate category of COVID-19 spread for [business](#) and [school](#) opening, we are seeing case rates, percent positivity, and COVID-Like Illness increase across all regions of the state.
- Last week, 13 counties had two benchmark metrics in the substantial category of COVID-19 spread and every county had at least one benchmark (rate per 100,000) in the substantial category.
- Over the last week, the percentage of inpatient beds in use stayed at approximately 89%, with the average of inpatient beds being used for COVID-19 patients increasing above 30%.
- Those over 65 years of age have the highest rate of hospitalization and death. While individuals between the ages of 20-44 account for the highest number of cases, they have a much lower rate of hospitalization and risk of death.

## Recommendations

- **Following the COVID-19 mitigation strategies is critical** to protect the lives of Arizonans, ensure adequate hospital capacity, and keep Arizona's economy and schools open. Arizona has continued to see an increase in COVID-19 cases over the past several weeks, and these measures help stop the spread and flatten the curve:
  - **Wearing masks** when you are out in public places, **washing your hands** often with soap and water, and **physically distancing** at least 6 feet from others.
- With the mild Arizona winter weather throughout much of the state, move activities and gatherings outdoors to encourage physical distancing and reduce transmission.
- Arizonans should wear masks and physically distance if attending small household gatherings with people who do not live in the same household, even if you are outside.
- Businesses should consider moving as much of their business outdoors as possible, including dining tables, gym classes, etc.
- Everyone plays a role in keeping Arizonans safe and our schools and businesses open. If an establishment is not complying with the COVID-19 mitigation strategies, please report the complaint to the ADHS COVID-19 compliance hotline at 1-844-410-2157 or online at [azhealth.gov/complianceCOVID19](https://azhealth.gov/complianceCOVID19).
- You are safer at home. Assess your risk each time you leave your home.

# COVID-19 RISK INDEX

## Know Your Risk During COVID-19

### For ALL Activities:

- Stay home when you are sick or if you think you have been exposed
- Wear a mask when feasible
- Keep at least 6 ft between yourself and non-household members
- Wash your hands frequently

### Parties Recreational Sports Receptions

Some activities can run the entire risk spectrum. More people in a smaller space equals a higher risk.

# Arizona's COVID-19 Timeline

The first case occurred in January 2020, and Arizona saw the first wave of cases in June and July. Arizona's mitigation strategies implemented in June and July resulted in a **75% reduction in cases**. Strategies that are still in place are identified in red:

- **Implementation of local mask requirements**
- **Pausing of bars, nightclubs, indoor theaters, waterparks and tubing operators**
- **Requiring restaurants to operate at 50% capacity and implement COVID-19 mitigation measures**
- **Implementation of benchmarks for schools, restaurants, and paused businesses:**
  - Established occupancy limits/recommendations
  - Implemented requirements for COVID-19 mitigation strategies

# COVID-19 Cases in Arizona

Five weeks ago, during the week of Oct, 18, over 9,000 COVID-19 cases were reported in Arizona. Last week, over 27,000 cases of COVID-19 were reported. This is a 179% increase.

# CLI (COVID-Like-Illness) & Syndromic Surveillance

Syndromic surveillance is one of the many tools that public health uses to monitor COVID-19. Arizona has participated in this national system since 2014 and has coverage of participating facilities across the state. These facilities account for 90% of inpatient facilities and 87% of emergency departments statewide.

When the percent of emergency department visits and inpatient admissions due to COVID-like-illness (CLI) is overlaid on the chart of hospital self reports of inpatient bed capacity and occupancy, there is a strong correlation between these metrics. CLI appears more sensitive, identifying potential increases in COVID-19 hospital occupancy several days in advance.

# Arizona Surge Line

The Arizona Surge Line is a centralized statewide system designed to keep hospitals and regions of Arizona from being overwhelmed by facilitating COVID-19 patient admission, transfer, and discharge to appropriate levels of care.

The number of transfers is a good indicator of the impact of COVID-19 cases on the healthcare system. Over the past two months, we have seen a steady increase in the number of transfers occurring.

\*November data through 12/2/2020

# Diagnostic Testing & Percent Positivity

The percent positivity in the last week, 14.5%, was the highest it has been since the middle of July. The number of tests is the highest it has been since the beginning of the COVID-19 response in January.

# COVID-19 Age Groups

The chart below shows the number of COVID-19 cases by specific age groups over the last month. The highest number of cases continues to be reported in the 20- to 44-year-old age group. The trend in the 20-44 years age group is similar to the trends seen in the beginning of June.

	Less than 20 years	20 - 44 years	45 - 54 years	55 - 64 years	Greater than 65 years
10/25/2020	1,908	4,186	1,455	1,122	1,153
11/1/2020	2,990	6,891	2,156	1669	1,735
11/8/2020	3,504	8,287	2,840	2124	2,239
11/15/2020	4,813	11,579	4,042	3,277	3,580
11/22/2020	4,425	11,619	4,081	3,356	3,964

# COVID-19 Outcomes

COVID-19 Cases

## Cases

Individuals between 20-44 years old account for nearly half of all cases, while those over 65 account for only 11%.

COVID-19 Hospitalizations

## Hospitalizations

Individuals over the age of 65 experience the highest hospitalization rate.

COVID-19 Deaths

## Deaths

While those over 65 years of age account for only 11% of cases, they have the highest risk of death. Those under 44 years of age have the lowest risk of death.

# COVID-19 Cases by County

Apache

Virtual

Onsite Support Services must  
be offered to students

Moderate

Hybrid

Masks and physical distancing  
required; no large gatherings

Minimal

Traditional

Masks and physical distancing  
required

# Business Benchmarks by County

Data for the weeks of Nov. 8 and Nov. 15

Transmission  
Category

Open

Paused

Substantial

Restaurants providing dine-in services at 50% occupancy

Bars, Nightclubs, Gyms, Indoor Theaters, Waterparks

Moderate

Restaurants/bars providing dine-in services, theaters, and waterparks at 50%; gyms at 25%

Bars and nightclubs not providing dine-in services

Minimal

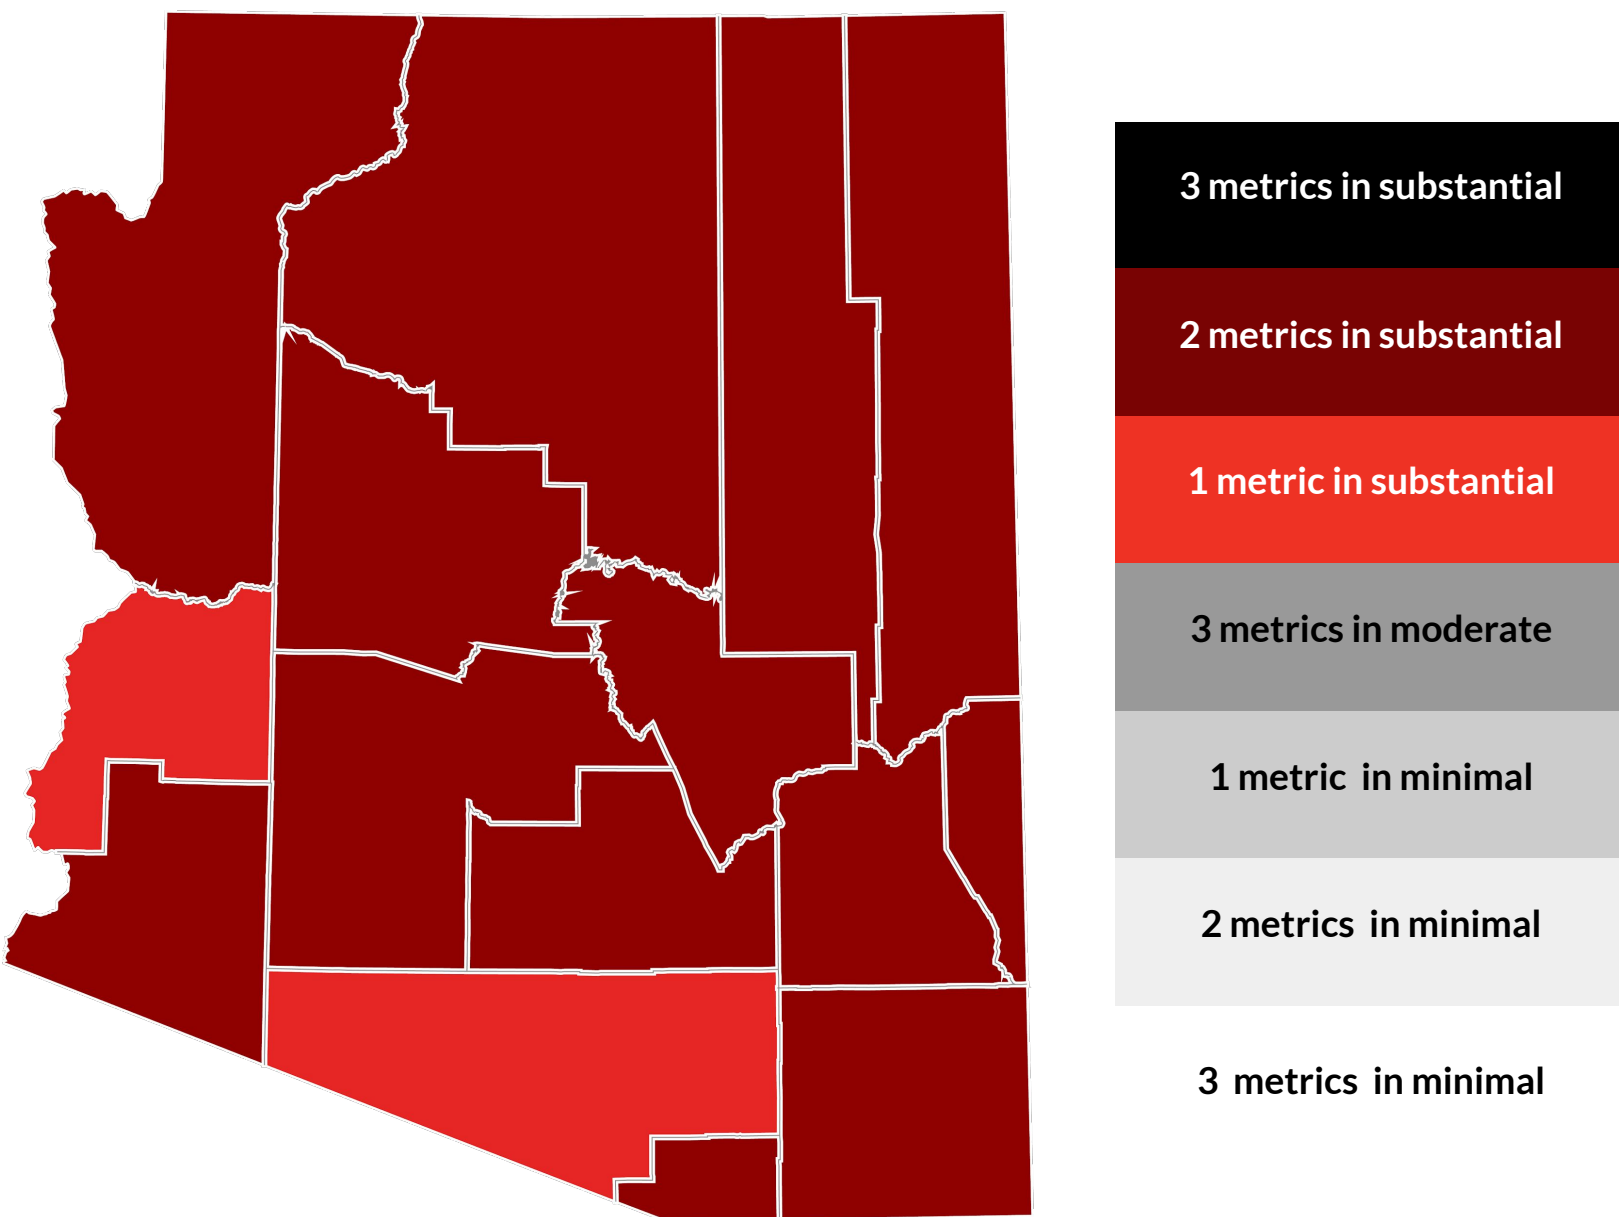

Gyms at 50%; otherwise, same as moderate until <3% positivity, then bars/nightclubs at 50%

Bars/nightclubs not providing dine in services until <3% positivity

For the weeks Nov. 8 and Nov. 15, all 15 counties have at least one of their metrics in the substantial category.

The benchmarks were set to establish thresholds for responding to increasing or decreasing COVID-19 transmission and its impacts on Arizona's healthcare system. When all three metrics meet the higher threshold, counties will move into the higher transmission category.

Counties' colors go from light to dark as their risk of moving to substantial transmission category increases.

For the weeks Nov. 8 and Nov. 15, all 15 counties have at least one of their metrics in the substantial category.

Looking ahead at the benchmarks for the weeks of Nov. 15 and Nov. 22, eleven counties have a two of their metrics in the substantial category and three have three of their metrics in the substantial category.

Weeks of Nov. 15-Nov  
22, 2020\*

Current Dashboard  
Weeks of Nov. 8 - Nov.  
15, 2020

3 metrics in minimal

\* Due to delays in reporting, benchmarks for the Weeks of Nov. 15 and Nov. 22 are provisional and subject to change prior to the official posting on the ADHS Business and Schools dashboards.

# Business Compliance

**5,111** Total complaints submitted to ADHS

**2,803** Unique business complaints

**2,573** Business complaints with follow-up complete

**609** Onsite inspections performed

**91%** Of onsite investigations performed on weekends

Approximately 97% of the business complaints were closed with technical assistance and/or education on implementing COVID-19 mitigation strategies.

ADHS has implemented several requirements for those businesses that are deemed high-risk with the goal of operating safely with public health as the priority.

The goal of the business compliance work is aiding those businesses in complying with these requirements so they can remain open and protect public health.

---

**35** Average number of daily complaints

**7** Number of counties that have agreed to investigate complaints

**32** Number of ADHS investigators following up on complaints

**2,065** Number of businesses that have completed attestations

# Statewide Mask Requirements

**100%**  
**of Arizona has**  
**some type of**  
**mask**  
**requirement**

## No Mask Requirements

**COVID-19 Mitigation Requirements, including masks, at all Schools, Gyms, Restaurants, Bars, Nightclubs, Theaters, Waterparks, Barbershops, Hair and Nail Salons statewide.**

## Local Mask Requirements

## County-wide Mask Requirements

# COVID-19 Data Summary

Through Dec. 3, 2020

346,421 cases

6,821 deaths

2,305,084 diagnostic tests

14.5% positivity for the week of Nov. 22
